There are almost as many theories about how magnets relate to pain relief, as there are beads in our catalog. Theories range from increased circulation of the blood to the loss of the earth's natural magnetic field. There have been many medical tests conducted throughout history, but serious investigative tests only began in the past quarter of a century.

So far, it seems that the only thing they completely agree on, is that it takes approximately 2400 gauss of magnetic strength to penetrate human skin. We have them covered ... our magnets are more than double the required strength.

Of the many explanations we've read and heard, the most logical is that, because pain is an electronic impulse; and magnets are created by electrical current. The magnet simply draws the pain signal to its self, and prevents it from reaching the brain. No magic. No complicated science; just a simple, natural diversion of the pain signal.

While we refuse to make medical claims, such as increased blood circulation or reduction of swelling, cysts, or calcium deposits, we have read and heard such claims ... some from our own customers.

To our knowledge, our magnets do not heal anything. They simply take away the pain signal. Judging by the low number of people who have utilized our money back guarantee, our products seem to bring relief to almost everyone who wears them as directed.

If you have a pace maker, are pregnant or have any serious medical condition, you should consult your physician before using magnetic jewelry.

The health benefits that that have been reported are plentiful and include:

- Anti-inflammatory activity
- Chronic Pain Relief
- Faster healing from injury or surgery
- Improved blood circulation
- Improved tissue alkalization
- Increased energy and well-being
- Increased tissue oxygenation
- Increased levels of cellular oxygen
- More restful sleep
- Pain relief and pain management
- Reduction of swelling
- Stress relief

During the past 155 years, the earth's magnetic field has been declining which has caused increasing health problems. In fact, when astronauts first went into space, they suffered bone calcium loss and muscle cramps from decreased exposure to the earth's magnetic field. Doctors discovered placing artificial magnetic fields in the space capsules effectively kept the astronauts healthier.

Magnetic therapy for pain relief and wellness dates as far back as the ancient Egyptians and Chinese healers in 200 B.C.

Magnetic therapy has been known to effectively relieve many painful conditions as told to us by our customers. Some of those conditions include:

Arthritis	High Blood Pressure
Back Pain	Headaches
Body Aches	Migraines
Bunions	Menstrual Cramps
Bursitis	Muscle cramps and spasms
Carpal Tunnel	Osteoporosis
Chronic Fatigue Syndrome	Pain associated with Polio
Chronic Pain	Poor Blood Circulation
Cramps	Rheumatoid Arthritis
Diabetes	Sprains
Fatigue	Tendonitis
Fibromyalgia	Tennis Elbow
Frozen Shoulder	Torn Ligaments
Foot Pain & Heel Spurs	
Insomnia

Attractive hand made custom magnetic jewelry with high quality 6000 gauss magnets. Professionally crafted with semi-precious stones, swarovski crystals, and other fine high quality materials.

It's the quality of the magnet that stops your pain not the quantity. This is because you won't get more gauss with more magnets. It the strength (gauss) of the magnets that matter. One high gauss magnet is better than many low gauss magnets.
